

In Figs. 2 and 3 we present the network of users and their communities for Andalusia and Barcelona, respectively. Each node represents a user, and they are connected if one has retweeted a tweet from the other. The weight of the edge is the number of retweets. The layout is the SFDP spring-block layout, and the colour of the user corresponds to the community identified by a modularity maximisation algorithm. More detailed information about the communities and their political alignments is provided in Tables 1 and 2.

Fig. 2 Network of users of the Twitter discussion for Andalusia elections. The green community correspond to Vox; blue and orange communities correspond to PP and Cs; purple, red and cyan correspond to PorA, PSOE-A and AA.

For Andalusia the largest community in users is PorA, followed by Vox, PP, AA, PSOE-A and Cs, in order. This list includes all the main parties in the electoral campaign, each represented in different communities. Other smaller communities have not been clearly associated with any political party or organisation and are set with no label in Table 1. Looking at the layout, one can observe a main cluster of communities with a central division between the left and right. In the centre-right, there is Vox (green), alongside PP. Next to them, at the centre-left, there is PorA (purple) surrounded by AA (cyan). The communities located in the center include PSOE-A (red) in the left division and Cs (orange) on the right division of the main cluster.

For Barcelona, the largest community by number of users consists of a combination of Cs, PP and Vox, all of which are right-wing Spanish nationalist parties. For

Table 1 Description of communities for Andalusia dataset, ordered by retweet count. The network is constructed with retweets as edges, including only communities with more than 1000 nodes. The first column indicates the order of communities by number of users.

simplicity, we refer to this community as Cs, as it has the most representation among the three in both the dataset and the election results. Similarly, the Junts community also includes the BCAP candidacy. The parties are ranked in order as follows: Junts, BComú, Vox, ERC, CUP and PSC. The main right-wing parties are clustered next to PSC. Additionally, there is a vertical separation between BComú and the pro-independence parties at the bottom of the layout. It is interesting to note that closeness between different communities strongly depends on their views regarding Catalonia’s independence. While in Fig. 2 we see PSOE-A and PorA (Podemos) together opposing Vox, here PSC and BComú are separated. Furthermore, we observe that Junts and CUP are positioned in the same region of the layout, despite being ideologically distinct parties: CUP is anti-capitalist, while Junts is right-wing. The right-wing Spanish nationalist parties, along with representatives from Vox in the centre, form the largest community by number of users. There is a large unidentified community in brown corresponding to French accounts, which we believe is not part of the electoral process in Barcelona.

Table 2 Political description of community centres for Barcelona dataset ordered by retweets number.

Fig. 3 Network of users of the Twitter discussion for Barcelona elections. The green community corresponds to Cs, blue are from Junts, purple corresponds to BComú, red corresponds to PSC, yellow corresponds to CUP and amber corresponds to ERC.

Finally, we compute the daily fraction of retweets made by each community as shown in Fig. 4. For Andalusia we can see that the most relevant actors throughout the entire period were Vox and PorA, with higher activity levels prior to the elections compared to after it. In Barcelona, the most active communities during all the period are Junts followed by Cs. Unlike in Andalusia, the network remained active after election day, reaching its highest peak on June 15, coinciding with the investiture day. On that day, the Junts community was the most active.

Fig. 4 Number of retweets per day during the electoral period by community.
